Kinderland Westside

The “Kinderland Westside” is located in a shopping center and is designed to occupy about 100 children for up to four hours. This task is accomplished with a varied play landscape extending over two levels. The Kinderland design is inspired by the Savanne. In reference to the many animal illustrations, the two levels depict the animals’ habitat. For instance, the entrance to the cloak rooms is conceptualized as a „canyon“. In contrast, the green hued reading area creates the impression of a bird’s nest in the treetops. In the main section with the crafts area there is a bench with a softly contoured edge of a riverbank, surrounding a sky blue “waterhole”.
